1. Document Purpose	4
2. Requirements addressed	4
3. Module.....	4
3.1 Diagrams	4
4. Detailed design	4
4.1 Sub-module name.....	4
4.1.1 Functions to be developed.....	4
5. Unit Tests	4
6. Tools and languages used	4
7. References	4

1. Document Purpose

Define the modules and functionality this document addresses.

2. Requirements addressed

#	Requirement	Notes

3. Module

Identify and describe the program modules that need to be built in detail so that a developer can easily understand.

3.1 Diagrams

Copy diagrams from architecture or other design documents to validate the specifications that the software will be built to address.

4. Detailed design

4.1 Sub-module name

4.1.1 Functions to be developed

5. Unit Tests

Identify unit tests that need to be performed to validate the functionality of the built functionality.

6. Tools and languages used

List all software that will be used to develop and needed to operate the developed code.

7. References

List all documents that were used in defining the design documented in this document.
